

Production - Best iPhone Camera Settings

[3. Production - Shooting Your Videos](#)

BEST SETTINGS IPHONE

Here we are, the best settings for iPhone. To keep it simple here is a list of the settings we recommend changing:

To access camera settings tap “Settings” and then “Camera”

To change the video quality tap “Quality” then select 4k or whatever is the highest.

Set FPS to 30. FPS is the number of video frames that are taken every second.

HDR - Disable

Auto FPS - OFF

Lock White balance - Enable

Format - Most compatible

Composition - Grid and level

Photographic styles - Standard Video style

And that is pretty much it.

Now when you navigate to the camera app you will see a grid and level on the view to line up your shot better.
